Education

University of St. Thomas Expected: December 2026

Bachelor of Science in Computer Science; Minor in Data Science

- **Relevant Coursework:** Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Database Design, Information Security

Technical Skills

Languages: Python, C#, Java, SQL, JavaScript, TypeScript, PowerShell, HTML/CSS
Frameworks & Development: .NET, Flask, React, REST APIs, Git, Azure DevOps, CI/CD, Unit & Regression Testing
Cloud & Data: Microsoft Azure, AWS, Microsoft Fabric, PySpark, Spark SQL, Power BI, SQL Server, SQLite
Security & Automation: Microsoft Graph API, OAuth 2.0, Microsoft Entra ID, Active Directory, Microsoft Defender, Sumo Logic

Experience

Software Engineer Intern June 2026 – August 2026

Beckman Coulter Diagnostics Chaska, MN

- Developed and tested **C#/.NET software** for the DxI 9000 clinical diagnostic system, delivering **4 features** and resolving **2 software defects** to improve system reliability.
- Diagnosed and resolved an **SQL Server/IoT Edge race condition** by implementing bounded retry logic, preventing false verification failures while preserving legitimate error detection.
- Refactored hardware control components using **inheritance and polymorphism**, enabling new RSM2 hardware support and unblocking **6 downstream features** while maintaining backward compatibility.
- Executed **unit, integration, boundary, and regression testing** using Moq, Microsoft Fakes, and Azure DevOps to validate software requirements.

Software Engineer Intern June 2025 – August 2025

U.S. Bank Hopkins, MN

- Developed **Python, PySpark, and SQL data pipelines** in Microsoft Fabric to process, clean, and validate enterprise workspace and audit datasets.
- Built an **API-driven audit logging workflow** integrating Microsoft Graph and Purview APIs to analyze **800,000+ records** and improve visibility into enterprise user activity.
- Analyzed **1,400+ Power BI workspaces**, identifying **400+ inactive environments** and opportunities for approximately **15% storage cost savings**.

Information Security Intern February 2025 – Present

University of St. Thomas Saint Paul, MN

- Investigated **phishing attempts, suspicious sign-ins, and security events** using Microsoft Entra ID, Defender, and Sumo Logic to support incident response and IAM operations.
- Built **Python and PowerShell automation** for security monitoring, log analysis, and API-based threat intelligence enrichment.

Projects

BOMJA Website | *Python, Flask, JavaScript, HTML/CSS* 2026

- Designed and developed a **full-stack client website** with responsive layouts, Flask backend routes, and an **administrative interface** for managing event links and images.

Matatu AI | *C#, .NET, Algorithms, AI* 2026

- Developed a modular game-playing AI using weighted heuristics and game-state evaluation; achieved a **58.1% decisive win rate** across **5,000 held-out games** against a random baseline.

IP Risk Triage Automation | *Python, Microsoft Graph API, SQLite* 2026

- Automated **Entra ID risk detection enrichment** using OAuth 2.0, Microsoft Graph, and Scamalytics APIs; implemented **risk-based SQLite caching** to minimize redundant requests.
